Esbilac[®] Liquid

Number 1 Selling Puppy Milk Replacer

Recommended as a complete food source for orphaned or rejected puppies or those nursing, but needing supplemental feeding. Also recommended for growing puppies or adult dogs that are stressed and require a source of highly digestible nutrients.

- ◆ Supplies necessary vitamins and minerals to ensure proper development and growth.
- ◆ Formulated to provide a caloric pattern similar to bitch's milk in protein, fat, and carbohydrates.
- ◆ Easy to digest, highly palatable, sterile, ready to feed formula.
- ◆ Ideal supplement for post-surgery and convalescence.

READY TO FEED, NO MIXING NECESSARY

DIRECTIONS FOR USE: All puppies should receive their mother's milk for at least 2 days, if possible. This colostrum milk gives extra nutrition and temporary immunity against some diseases.

Esbilac liquid may be fed at the daily rate of 2 tablespoons of liquid (30 mL) per 4 ounces (115 g) of body weight. The daily feeding rate should be divided into equal portions for each feeding.

Puppies' needs vary and this amount may have to be increased or decreased, depending on the individual. Small or weak puppies may need to be fed Esbilac liquid every 3 to 4 hours, while larger puppies do well when fed Esbilac liquid every 8 hours. Weigh the puppies daily to assure adequate feeding. **Consult your veterinarian for additional advice. Not for human consumption.**

Esbilac liquid should be fed at room or body temperature. When a food supplement is desired for growing post-weaned puppies, show dogs and old or convalescent dogs, mix Esbilac liquid into the daily ration at the rate of 2 tablespoon (30 mL) per 5 lbs. (2.2 kg) of body weight.

PREGNANT AND LACTATING BITCHES: Mix Esbilac liquid into the daily ration at the rate of 2 tablespoons (30 mL) per 5 lbs. (2.2 kg) body weight.

Shake well. Refrigerate after opening. To assure freshness discard or freeze within 3 days. Do not freeze in original container.
